

SANTHOSH CHINTAPENTA

B.Tech – Computer Science (AI & ML) | ANITS, Visakhapatnam
+91-9974483656 | santhoshchintapenta31@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Results-driven Computer Science undergraduate with a strong academic record and hands-on experience in full-stack web development and machine learning. Demonstrated ability to design and deliver end-to-end software solutions, from database architecture to responsive front-end interfaces. Proficient in Java, Python, and JavaScript, with a growing portfolio that includes an award-winning ML project and multiple production-grade applications. Committed to continuous learning in software engineering and artificial intelligence.

EDUCATION

B.Tech – Computer Science (AI & Machine Learning)

2023 – Present

Anil Neerukonda Institute of Technology and Sciences, Visakhapatnam | CGPA: 8.75 / 10.0

Intermediate – Mathematics, Physics & Chemistry (MPC)

2023

Narayana Junior College, Andhra Pradesh | 87%

Secondary School Certificate (SSC)

2021

Narayana School, Visakhapatnam | CGPA: 10.0 / 10.0

TECHNICAL SKILLS

Programming Languages:	Java, Python, JavaScript
Web Technologies:	Full-Stack Development (MERN Stack — MongoDB, Express.js, React, Node.js)
Database:	MySQL, MongoDB — schema design, queries, CRUD operations
Machine Learning:	Logistic Regression, Random Forest, SVM, model evaluation
Core Concepts:	Data Structures & Algorithms, Object-Oriented Programming
Tools & Platforms:	Git, GitHub, Visual Studio Code

EXPERIENCE

Full-Stack Web Development Intern | Industry Internship

- Built responsive web applications using HTML, CSS, and JavaScript, improving user interaction and cross-device compatibility.
- Engineered backend services in Java and integrated MySQL databases to support reliable data storage, retrieval, and management.
- Implemented core features including form validation, dynamic data rendering, and database-driven content.
- Collaborated with team members on debugging, code reviews, and performance optimisation.

PROJECTS

NexTest – Online Examination Platform

- Built a full-stack online examination platform with role-based admin and student dashboards, secure authentication, and end-to-end exam workflows using React, Node.js/Express, Firebase Auth, and Tailwind CSS.
- Implemented exam creation and management features (CreateExam, ExamsList, ManageQuestions) to configure exams, organise question banks, and track submissions.
- Developed a coding assessment workspace with an in-browser code editor, test case panel, and run/submit flow backed by Node.js REST APIs.
- Integrated Firebase-based authentication for secure login, session management, and role-based access control.
- Added analytics and monitoring views to visualise participation, scores, attendance, and live exam status in real time.
- Built automated question/test-case generation utilities and bulk student onboarding tools with Excel-based result export.

Breast Cancer Detection — Machine Learning Classification Model

- Developed a supervised ML model in Python to predict breast cancer diagnosis from clinical dataset features with high accuracy.
- Conducted end-to-end data preprocessing: cleaning, feature scaling, and normalisation to maximise model reliability.
- Implemented and benchmarked Logistic Regression, Random Forest, and SVM, selecting the best-performing model.
- Evaluated model using accuracy, precision, recall, F1-score, and confusion matrix.
- Presented at a competitive Hackathon and secured the **Runner-Up position**.

Automated Timetable Generator — Full-Stack Web Application

- Designed a full-stack academic timetable automation system, eliminating manual scheduling conflicts for faculty, subjects, and classrooms.
- Built a Java-based scheduling engine that allocates time slots while enforcing constraint validation.
- Created an intuitive admin dashboard using HTML, CSS, and JavaScript for real-time timetable review.
- Integrated MySQL to persistently manage subjects, teachers, classrooms, and schedule configurations.

Budget & Finance Tracker — Web Application

- Built a web-based personal finance management application to monitor income, expenses, and budget goals daily.
- Designed a clean, interactive UI using HTML, CSS, and JavaScript for intuitive transaction entry.
- Implemented dynamic expense categorisation and real-time budget tracking to identify spending patterns.

ACHIEVEMENTS & POSITIONS OF RESPONSIBILITY

- **Runner-Up, Hackathon** — Machine Learning-Based Breast Cancer Detection Project.
- Solved **150+ Data Structures & Algorithms problems on LeetCode**, demonstrating strong problem-solving skills.
- Google Student Brand Ambassador — organised student engagement events and promoted technology learning initiatives across campus.

CERTIFICATIONS

- Data Structures and Algorithms using Python — PW Skills
- Python Fundamentals — Infosys Springboard
- Introduction to Generative AI Studio — Google Cloud (December 2025)
